## **FEATURES AND SPECIFICATIONS**

### **GENERAL DESCRIPTION**

The Dunham-Bush CR fancoil units are of low noise, light weight, compact and low height construction. These fancoils are specially designed to cater for today's low ceiling height residence, offices, light commercial applications and new or existing building air-conditioning. All fancoil units are completely factory packaged with blower fan, motor, cooling coil, circuited and terminated pipe connections. They are completely factory assembled and ready for field installation.

### **CASING**

All fancoil units are constructed from minimum 1.0 mm thick galvanized steel. The casings of ceiling exposed and floor exposed models are bonderized and coated with oven-baked powder paint. All casing panel supports are formed or bent to provide a sturdy and rigid construction which eliminates "drumming" and assures "vibration-free" operation. Casing panels are internally insulated with 1/2" thick x 3 lb. per cu. ft linacoustic fiberglass. Casing panels are easily removable for access to internal components for service and repair.

### **MOTORS**

Motors are permanent split capacitor type with built-in thermal overload protection. Vibration transmission is eliminated by the use of resilient motor mount. Motors are supplied with permanently lubricated, maintenance-free sealed ball bearings. Each motor is provided with a minimum of 3 speed selection. Motor leads are terminated to outside casing with terminal cover for easy electrical connection.

### **FAN WHEELS AND HOUSINGS**

The light weight double-width, double inlet, forward-curved centrifugal fan wheels are dynamically balanced to provide low sound levels, vibration-free operation, even air distribution and minimum power requirement.

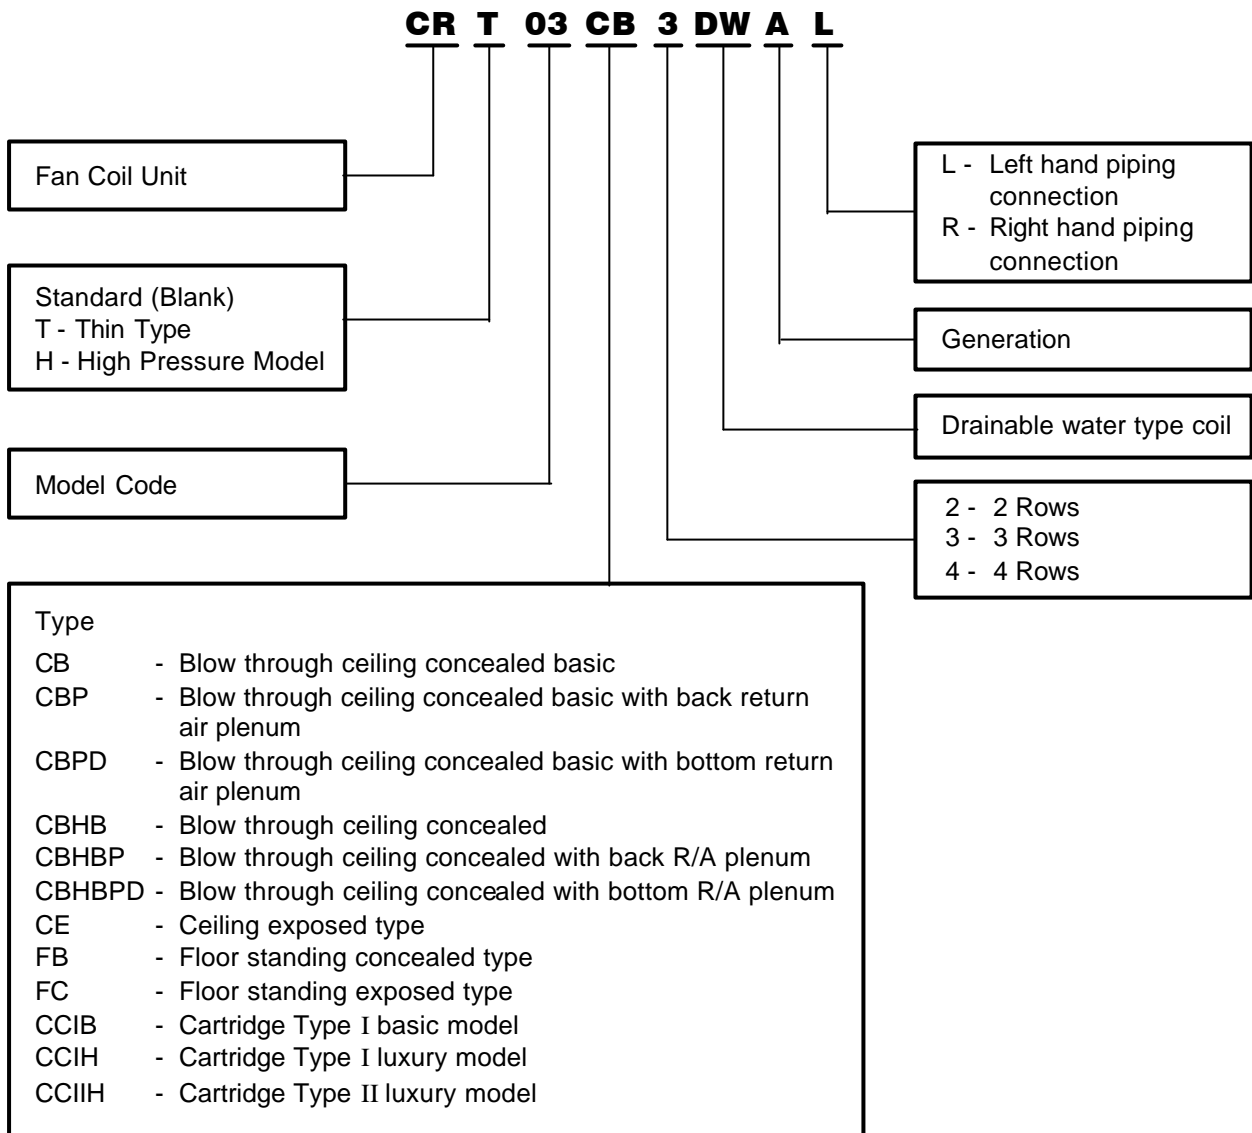

### **COILS**

All cooling coils consist of staggered rows of 3/8" O.D. copper tubes of minimum wall thickness 0.014 inch, mechanically expanded into die-formed corrugated aluminium fins of thickness 0.006 inch. All coils are leak tested at 350 psig air pressure and are suitable for up to 232 psig working pressure.

### **CONDENSATE DRAIN PAN**

All condensate drain pans are constructed from 1.0mm thick stamped steel plate. The drain pan is coated with oven-baked powder paint and externally insulated with PE foam insulation.

## UNIT NOMENCLATURE

**Notes:**

1. Left Hand or Right Hand piping connection is determined by viewing from return air.
2. Drain pan piping connection will always be on the same side with evaporator pipe connection.
3. Standard Model (CR) includes: CB/ CBP/ CBPD/ CBHB/ CBHBP/ CBHBPD/ CE/ FB/ FC/ CCIB/ CCIH/ CCIH (2 or 3 rows)
4. Thin Type Model (CRT) includes: CB/ CBP/ CBPD/ CBHB/ CBHBP/ CBHBPD (2 or 3 rows)
5. High Pressure Model (CRH) includes: CBP/ CBPD (2, 3 or 4 rows)
6. Unit height for CRT series is 220mm.
7. CRH series is designed for higher static pressure.
8. All CC units require condensate pump for drainage from the drain pan. The luxury models CCIH and CCIH are complete with remote control, microprocessor and alarm system. The luxury CCIH models are supplied with condensate pump.

Notes (CR, CR-CC) :

1. Motor is 220V/1Ph/50Hz 3 speed motor.
2. Air volume is defined as external pressure 0 inch WG.
3. Cooling capacity is based on water inlet/outlet temperature of 44.6°F / 53.6°F and entering air temperature 80.6°Fdb / 67.1°Fwb.
4. Heating capacity is based on water entering temperature of 140°F and entering air temperature 70°F.
5. Noise data based on high speed.

Notes (CR-CE, CRT) :

- 1.) Motor is 220V/1Ph/50Hz 3 speed motor.
- 2.) Air volume is defined as external pressure 0 inch WG.
- 3.) Cooling capacity is based on water inlet/outlet temperature of 44.6°F / 53.6°F and entering air temperature 80.6°Fdb / 67.1°Fwb.
- 4.) Heating capacity is based on water entering temperature of 140°F and entering air temperature 70°F.
- 5.) Noise data for CR-CE model is based on high speed.
